

# Outsource Your Primavera Hosting to MLM Project Services, Inc.

## Why should you outsource your Primavera Hosting (and other applications) to MLM Project Services?

In these economic times, an organization should seriously consider whether performing “all” IT functions in-house is in the best interest of the organization. There is significant capital investment in acquiring and maintaining IT infrastructure that ensures maximum performance and security.

Required are rack systems, servers, network devices, database and operating systems, cooling and humidity environmental controls, constant/uninterrupted power, adequate bandwidth, wiring, monitoring systems, backup systems, and security systems to prevent Internet attacks. On top of that, the organization has to hire, staff, and train IT support personnel to administer, maintain, and support all the equipment and systems... and the applications that run on them.

Additionally, there are costs for inventory of spare parts (in case of a component failure), plus the time and expense to apply software patches, fixes, and upgrades, and license management.

In regards to IT personnel, it is increasingly getting harder and harder to find and keep qualified talent, and it is crucial to keep these individuals happy and motivated so they won't walk out the door with all your training and knowledge in their heads. It is common sense that IT personnel would much rather work on challenging business initiatives and projects, than performing mundane operational tasks and maintenance. This provides great benefits to the company by completing strategic business projects faster (driving company revenue), while satisfying the personal needs of your IT talent!

MLM Project Services Managed Hosting Services expertly provides all of the above systems and support at a price point much lower than self-hosting and self-managing. Lower costs are achieved by having multiple customers share our datacenters, IT personnel, and inventory of spare parts; spreading the cost burdens among multiple customers creating cost efficiencies and economies of scale.

### **Utilizing MLM Project Services results in immediate and dramatic cost savings!**

MLM's low predictable monthly fees are funded from a company's Operating Expense Budget (not Capital Expenses), and those savings go straight to the company's bottom-line profits.

### **It is time to ask yourself some important questions:**

- Do you want reliable secure access to your Primavera and other applications 24x7x365?
- Do you want to reduce IT expenses while improving quality of service?
- Do you want new applications accessible within days (not weeks or months)?
- Do you want growth that is both linear and scalable?
- Do you want monitored and supported systems around the clock 24x7x365?
- Do you want completely redundant systems that protect against outages?
- Do you want automatic failover connections to multiple Internet providers to prevent Internet outages?
- Do you want a Service Level Agreement guaranteeing 99.95% uptime?

- Do you want all of the above for significantly less money than you will pay or are currently paying (while not receiving the benefits)?

The obvious answers to all of the above are “Yes”, and the obvious answer to your Primavera outsourced hosting needs is MLM Project Services.

**Here is what you can expect from MLM Project Services:**

1. Dedicated System Environments
2. Customer Owned and Controlled Software and Data
3. State-of-the-Art Tier III Data Centers around the World
